

Major Project

You have 3 projects to choose from

1. Music Player App
2. Social Media Web App
3. Cloning Quora

Each project must have certain features. You must add these features to your project. There are some optional features as well. Implementing them is not compulsory but it would be really fun to add them.

Fill out the google form after going through the projects and required features

<https://forms.gle/3yx6gEfXj7eX8aka6>

Music Player

Required features

1. Creating APIs (you can fill in dummy data or find some actual data from a free source)
2. Creating Playlists, Queues
3. Marking Favorite (at least 2 of these)
 - a. Artist
 - b. Album
 - c. Songs
4. Saving user's preferences for music
5. Social login + Local Login
 - a. Account verification by email
 - b. Password reset option for local login
6. Show a song/album/artist to be trending if a lot of users mark it as favorite

You can also add more things like (completely your choice):

1. Creating APIs for front end framework app for your project.
2. Sharing what you're listening to, on social media

Social Media Web App

(Inspired from Facebook, You can use some code from Codeial too!)
